

The StressCrete Group

Decorative Concrete Finish Options

The Décor Series of colors adds warmth and vitality to an already attractive product, enhancing the ability of discerning designers to both beautify and harmonize any lighting project. Available in a wide selection of colors from earth tones to delicate pastels, StressCrete's Décor concrete colors are unique in the pole world in that the color permeates throughout the entire pole rather than being merely a surface treatment. Both available surfaces, etched and polished, combine the attributes of a solid colored matrix and the undeniable beauty of natural stone, with stunning results. With all optional pole finishes, the appearance of the pole remains consistent over time, as well as requiring zero maintenance.

Optional Concrete Pole Finishes for Decorative Poles:

Natural Finish: All of our decorative concrete poles are available with a naturally beautiful exposed aggregate finish with no acrylic. Although all StressCrete poles (coated and uncoated) have a Lifetime warranty, we also offer the below three coating systems that the customer may choose for aesthetic reasons and for additional peace of mind.

Silane Water Repellant Seal: is a high performing and efficient sealer which deeply penetrates into the concrete pole. In extreme weather conditions, it assists in stopping intrusion of water, salts, de-icers chemicals and acids. Its small molecular structure allows for maximum penetration into the concrete subsurface. Having a natural appearance, it does not produce surface buildup, does not darken or effect the otherwise natural color and appearance of the pole.

Acrylic Clear Coat: is a high performance, two component sacrificial Acrylic Urethane coating which provides durability, resistance to chemicals, salt, and de-icers. Along with concrete protective properties, it also provides a glossy finish to the pole, which enhances the concrete's natural colors. Although this product has excellent gloss retention, like any coating, it will fade gracefully over time. Depending on environmental conditions, the gloss of this product will last at least 5 to 15 years. If a glossy finish is preferred over the life span of the pole, the coating can be reapplied.

Anti-Graffiti Coat: is a unique, protective, non-sacrificial coating that provides an effective easily cleaned anti-graffiti surface in a high gloss finish. It has excellent gloss retention and is both abrasion and impact resistant withstanding multiple cleanings. Its high performance properties combats common graffiti materials such as spray paint and markers that can be easily removed using a solvent cleaner. With its outstanding weather-ability, our anti-graffiti coating will maintain its gloss and color retention for years.
